

Using these **6 ecosystem traits** we can begin to design creative solutions and really importantly as Permaculture thinkers solutions that avoid perpetuating late stage capitalist traits of growth, scarcity, conflict, power, financial inequality, secrecy and scapegoating

With this in mind let us take a look at our identified problems and solutions and apply this to the table in the worksheet. We will set out each problem highlighted in part two and apply each of the ecosystem traits to give a solution to each issue/problem.

We will use another example to show how this works in practice, our given example below is 'Increase the number of BIPOC members on the board of Trustees'
